Experience

Ericsson

Summer Internship R&D, 2022-06 – 2022-08

Full-stack development for an internal development tool at Radio Software Lab department. I was collaborating with five other summer interns who were working together on the same project. The projects involved both backend development utilizing Python and frontend development using React. Our team leader underestimated what we could achieve and we finished the work in two weeks which he thought would take the whole summer.

Ericsson

Technical Intern, 2020-01 – 2020-05

Worked with development and testing of an internal test system software. I was part of a team of four and my main task was debugging bugs that occurred following the upgrade from an older version of Python to Python 3.0. I also gained experience in testing and code review through the release of two major updates during my time on the project.

Post Nord

Postman, substitute 2019-10 – 2019-12

Responsible for sorting and delivering mail in my own district.

Education

Linköpings universitet

August 2021 – June 2026

Master of Science in Computer Science and Software Engineering, 300 hp

Rudbecks Gymnasium, Sollentuna

August 2016 – June 2019

Engineering and technology specializing in software

Volunteer work

Datateknologsektionen

Admin & Spons, 2023-05 – now

As an Admin, you are part of the Web Group and are responsible for ensuring that the section's digital systems are functioning and have the features the section needs. The section's digital systems include, among other things, the section's website and member page. Admin involves working with full-stack development, both backend and frontend. My role as Spons entails actively seeking collaborative partners who can contribute to and support the organization of our event, Hackathon. After hard work and dedication, I am proud to say that our sponsors this year are Opera, MindRoad, and Redbull.
